EXPERIENCE

Accenture, Oslo — Senior Fullstack Developer and Solution Designer

NOVEMBER 2021 - PRESENT

Project: KLP

Since joining Accenture, I have been a key contributor to the KLP project, one of the largest technology initiatives in the Nordics. The project focuses on migrating KLP's on-premise solution to the cloud, providing an enhanced user interface for case handlers and members to effectively manage their pensions. With over 10 development teams, this large-scale project aims to modernize and optimize KLP's operations.

Full Stack Developer

Initially joining the team as a backend Java developer, I have expanded my expertise to include frontend development, as well as working with Camunda and Kafka. My role involves developing new functionality, enhancing existing features, and resolving defects.

Assistant Defect Manager

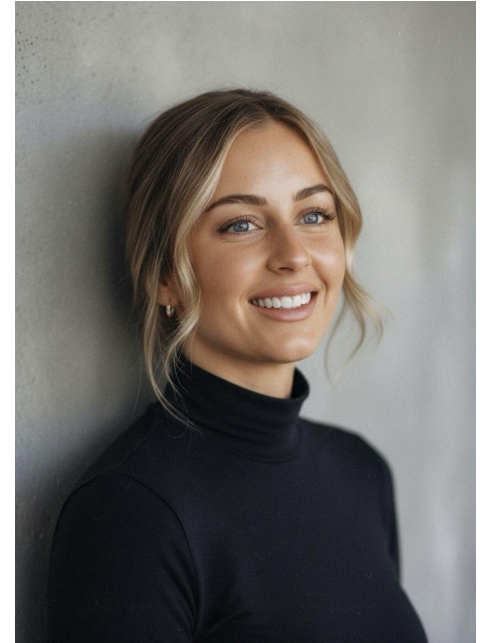

Since 2022, I have taken on the role of Assistant Defect Manager, overseeing the triaging and assignment of defects to appropriate teams. I ensure timely resolution and continuous progress, promoting a collaborative environment to address defects efficiently. For context, in 2023 I worked on a total of 393 defects and so far in 2024 (per end of September) I have worked on 210 defects.

Subject Matter Expert for a key project application

After handling complex issues related to KLP's payment application, I was appointed as the Subject Matter Expert for this critical area. My role serves as the main point of contact for any technical team members who need assistance with the application, while also working closely with the product owner to deliver strategic solutions and ensure the application's stability and performance.

Technical Solution Designer

As of early 2023, I have been entrusted with the role of Technical Solution Designer, responsible for architecting solutions mostly within my team but also for other teams. To strengthen and validate my expertise, I earned the Technical Architect Associate (TAA) certification at Accenture, which emphasizes advanced solution design and architecture best practices.

TECHNICAL SKILLS

Backend : Java, Spring, SQL, Camunda, Kafka, Git, Python, C#

Frontend : React, TypeScript, JavaScript, CSS, HTML

Other : API development and integration, adapters, testing, debugging, defect analysis

CERTIFICATIONS

Technical Architect Associate certification (Accenture), AI-900 (Microsoft), Reinvention with Agentic AI (Accenture), Kotlin for Java Developers (JetBrains)

LANGUAGES

Norwegian and English (native)

Vinmonopolet, Oslo — *Store Employee*

AUGUST 2020 - DECEMBER 2021

Scandinavian Airlines, Oslo — *Cabin Crew*

MAY 2016 - JULY 2020

EDUCATION

OsloMet, Oslo — *Bachelor of Engineering in Data Engineering*

AUGUST 2021 - PRESENT

Currently working on this degree part time.

Focus on programming, software, AI, and system development. The program integrates key principles of computer systems, network architecture, and foundational knowledge in mathematics and sciences.

Completed courses:

- DAPE1400 Programming
- DATA1100 Technology and Society for Programmers
- DATA1200 Inclusive Web Design
- DATA1500 Databases
- DATA1700 Web Programming
- ITPE3100 Computer Security
- DAVE3625 Introduction to Artificial Intelligence

Academic Work, Oslo — *Java Program*

SEPTEMBER 2021 - NOVEMBER 2021

Completed an intensive program in Java, covering object-oriented programming. Developed skills in database modeling, Spring Boot, basic frontend development, version control, and Agile methodology.

University of Oslo, Oslo — *Individual subjects*

AUGUST 2020 - JUNE 2021

Completed courses:

- IN1150 Logical Methods
- IN1050 Introduction to Design, Use, Interaction
- IN1000 Introduction to Object-oriented Programming
- IN2150 IT in Organizations

Rogers State University, Tulsa — *Bachelor of Technology*

SEPTEMBER 2011 - MAY 2015

Specialized in Applied Technology, the program focuses on practical skills and management in tech fields. It emphasized technical expertise, problem-solving, project management, and leadership.
